

Expense Tracker App

Data-Driven Financial Intelligence Dashboard

Project Overview

A sophisticated FinTech application designed to empower users with real-time expense tracking, automated categorization, and visual spending analytics. This system mimics the high-stakes data environments of platforms like CRED and Razorpay.

Industry Context: Expense tracking is a cornerstone of modern personal finance, used by millions across Google Pay, Mint, and Paytm to manage financial health.

Tech Stack

Python

SQL

Streamlit

Pandas

Plotly

FastAPI

Core Features

- **Dynamic Analytics:** Real-time breakdown of spending by category.
- **Data Persistence:** Secure storage of transactions using a relational database.
- **Intuitive UI:** Modern dark-themed dashboard with interactive visualizations.
- **Budget Intelligence:** Automated comparison of spending vs. income goals.

Technical Architecture

Built with a modular approach, the application separates the **Data Ingestion Layer** (handling user inputs), the **Logic Layer** (calculating aggregates and trends), and the **Presentation Layer** (rendering the UI).
